DC fast chargers, available in Mauritius from Green Eco Solar

For hotels, shopping centres, offices, car parks and fleets that need to charge electric cars faster than a home charger can. We check your site's power supply first, and the chargers can be planned together with a solar photovoltaic and battery system.

A DC fast charger beside an electric car, with two charging cables.

Floor-standing DC fast charger units in white and black.

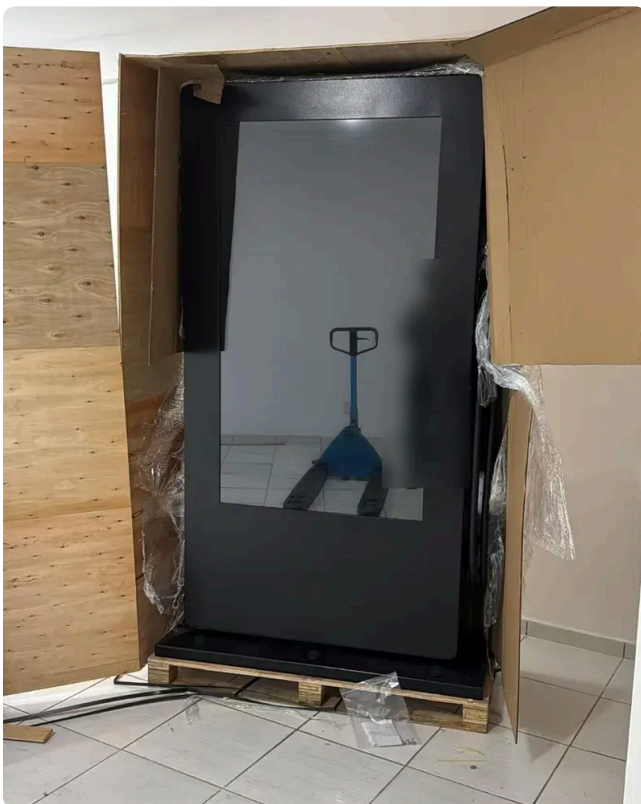

DC fast chargers – overview

What we offer

Charger type	DC fast chargers for public, business and fleet parking
Connector	CCS2, the DC connector used by most electric cars sold in Mauritius
Power	Several power levels; the right size is chosen after we check your site's electrical capacity
Management	Network-ready for charger management software (confirmed per model in your quote)
Solar option	Can be planned together with a solar panel (photovoltaic) and battery system
Pricing	No list prices. You receive a written quote after the site survey.

How it works

1. Send us your site location and parking layout on WhatsApp.
2. Free site survey: power supply, cable routes and parking bays.
3. Written quote with the charger model, power level and works needed.
4. Delivery, connection and handover by the Green Eco Solar team.

A DC fast charger unit unpacked from its crate.

Charger crates on delivery.
